Description

SPAGUARD PHOSPHATE REMOVER improves water by removing phosphate pollutants quickly! SpaGuard Phosphate Remover is ideal for spas with salt systems to ensure peak performance and superior water quality.

Directions for Use:

1. Add 1 fl oz of SpaGuard Phosphate Remover weekly to 500 gallons of spa or hot tub water to keep phosphates low.
2. For high phosphate levels of 1,000 ppb or higher, add 3 fl oz and test for phosphate levels the following day. Recommended phosphate levels in a spa or hot tub are below 125 ppb.
3. Follow immediately with SpaGuard Water Clarifier, per label directions, and run filter for two hours.
4. Clean cartridge after treatment is complete.

Note: Spa Phosphate Remover may cause spa water to become cloudy. This is normal and is a sign that the product is working. To clear the water quickly, use SpaGuard Water Clarifier, per label directions, with the filter running. Cleaning or rinsing the filter may be necessary to help clear the water.
